PROFESSIONAL SUMMARY

Software developer focused on backend and DevOps, with production experience since 11/2024 (.NET/C#, PostgreSQL, Python automation); promoted from intern to developer in under six months. At DIPLONAUTIC I build and maintain the company's official app in production, control its deployments and organize the work in sprints with Gitflow. At Imagine I set up CI/CD pipelines with GitHub Actions that build and ship Docker images automatically, and kept dev and production as separate, isolated environments for every app. I also build and manage AI agents and agentic workflows, and use AI coding agents in daily development. Looking to keep growing in infrastructure as code, Kubernetes and cloud.

TECHNICAL SKILLS

CI/CD & Automation: GitHub Actions · GitLab CI · Git · Gitflow · Python scripting · Bash

Containers & Orchestration: Docker · Kubernetes — Pods, Deployments, Services, Ingress, Helm

Operating Systems: Linux · Windows

Cloud & IaC: AWS: EC2, S3, EKS, Aurora (RDS) · Azure: AKS, Blob Storage, Azure SQL · GCP: GKE, Cloud Storage, Cloud SQL · Terraform

Observability: Prometheus · Grafana

Platform: Coolify self-hosted PaaS · Vercel · Dev/prod environment isolation

Security: Pomerium Zero Trust · Row Level Security (PostgreSQL/Supabase) · JWT & role-based authentication · Secrets & environment variables · SSH, HTTPS/TLS · Least-privilege access

Databases: PostgreSQL · SQL Server · MySQL · Supabase · Firebase

Development: Python · C# / .NET · TypeScript · SQL · FastAPI · Next.js / React · REST APIs · Prisma · EF Core

AI & Agents: AI agent management & orchestration · AI coding agents (Claude Code) · Agentic workflows (LLM tool/function calling) · n8n automation · Ollama · Structured-output LLM calls

Data: ETL · KPI / data modeling · SQL

PROFESSIONAL EXPERIENCE

Software Developer — DIPLONAUTIC, Barcelona, Spain 10/2026 – Present

- Develop the company's software end to end: I choose the technology, architecture and design, and build with AI coding agents (Claude Code), verifying every change with tests.
- Maintain the company's app in production for real users and control its deployments across separate environments, working in sprints with a Gitflow branching model.
- Integrate the company's users with Claude.
- Also cover systems administration and helpdesk, backing up the IT team when they're short-handed.

Software Developer — Imagine Group, Barcelona, Spain 05/2026 – 07/2026

- Built CI/CD pipelines with GitHub Actions that built and published Docker images, deployed automatically to a self-hosted Coolify hub.
- Kept a separate database and environment for every app, so dev and production never mixed. Access to the hub runs through Pomerium Zero Trust.
- **dm-tools:** built the data integrations behind a suite of ~20 AI marketing tools. Pulled data from Meta, TikTok, Google Ads, GA4, Shopify and Merchant Center and turned it into automated performance reports, using SQL on PostgreSQL/Supabase.
- **Imagine OS:** a multi-org PSA platform on Supabase (PostgreSQL + RLS) that tracks margin and utilization per client, project and person. Also built an AI assistant that can take actions inside the platform through tool/function calling, not just answer questions.
- **AdSpark:** an AI app for creative ideation that analyzes a brand straight from its URL, fully translated into Spanish, English and Catalan (Next.js 16, React 19, Supabase, OpenAI).

Backend Developer — Novicell ES, Barcelona, Spain 05/2025 – 03/2026

- Built C# and .NET integrations on Sitecore across 3+ simultaneous client projects, delivering consistently across sprints with no production incidents.
- Worked in sprint-based delivery: planning, reviews and coordination with project managers; contributed to Next.js frontends when needed.
- Promoted from intern to developer in under 6 months, the only one on the team that year.

Backend Intern — Novicell ES, Barcelona, Spain 11/2024 – 05/2025

- Developed and maintained dynamic websites in .NET and Sitecore on real production codebases from day one; learned C# and Sitecore entirely on the job.

SELECTED PROJECTS

Diplonautic (technical test) — Built as the technical test for DIPLONAUTIC: a corporate website and staff intranet for a Barcelona marine-repair company, with permissions in PostgreSQL (Row Level Security, triggers, invite-only sign-up) and an AI assistant that answers with real data and the asker's permissions. ~175 pgTAP, ~190 Vitest and Playwright E2E tests run on GitHub Actions. *Next.js 16, Supabase, PostgreSQL, GitHub Actions.*

Spotify Top Tracks Pipeline — Pulls my top tracks from the Spotify API, cleans them with Pandas and loads them into SQLite, then renders a Plotly chart. Runs weekly on GitHub Actions, which commits the updated data and chart back to the repo — no manual steps. *Python, Pandas, SQLite, GitHub Actions.*

Mira.IA (in development) — A multi-tenant SaaS for AI search visibility analytics (GEO/AEO). It runs monitored prompts across ChatGPT, Claude, Perplexity and Gemini, then uses structured-output LLM calls to pull out brand mentions, position and sentiment. Built with JWT auth, plan limits enforced server-side, daily scheduled runs and per-run cost tracking. *Next.js 16, PostgreSQL (Supabase), Prisma.*

Sala de Reservas — Room booking platform with role-based authentication, admin panel and email notifications (Resend API). *.NET, EF Core, Tailwind CSS.*

Study Bot — AI academic assistant with mock-exam generation from personal notes and Google Calendar integration. *React, FastAPI, Ollama, SQL Server.*

EDUCATION

Degree in Applied Data Science (in progress) — UOC (Universitat Oberta de Catalunya) 09/2026 – 05/2030

CFGS in DAM (Multiplatform App Development) — Prat Educació, Barcelona 09/2023 – 06/2025

Electronic Technician — Instituto Leonardo Murialdo, Buenos Aires 03/2019 – 12/2022

CERTIFICATIONS

Anthropic: Claude Code in Action (03/2026)

IBM: Python for Data Science, AI & Development (03/2026) · Introduction to Data Engineering (03/2026)

UTN.BA: Python 3, Beginner Level (2023) · Fundamentals of Programming (2022)
